Click to view Everying Wish your music library could go where you go? I don't intend to take it to an iPod, which is not always practical. I'm talking about streaming your tracks to any PC connected to the internet, be the desktop in your office, the notebook you take on the road or even the iMac in the mother-in-law. Thanks to the broadband, the Internet pipes are now fat enough to pay your music almost everywhere. What you need to decide is how to do it: Stream Songs directly from your PC or use a hosting service that stores your online library. Let's take a look at the pros and against each one and we learn how to free your music using the methods in both fields. Hosting at HomeThe minimal resistance path is to leave your music library in your current home: your home PC. Because there is nothing to load, you can start streaming almost instantly. You just need to choose an application / service that meets your needs. Gina recently written on a Doozy: the Internet-Jukebox Jinzora program. It is a killer solution, but perhaps a bit complex and consumed in terms of time for most users, something with all the modification modifications of the PHP script and the MySQL databases. Fortunately, there are simpler and easier options. An advenu, which can send your music to other PCs or even a Windows Mobile smartphone 5. However, it is still in beta, still limited to 250 songs, and still designed to work only with iTunes.Listen Up libraries, iTunes users: now you can tune in to your music library from any PC (or even a Windows ... it is also the Morethere Streampad, which works with any musical library and has a truly impressive concert section (dozens office of Live performances from well-known artists). However, the latest version is currently in the closed-alpha phase, so it's not pretty ready for the first half. Your best bet: ORB. Easy to configure, full chock of great features and, above all, free. ahimÃ¨, the desktop software requires Windows (although it can pass in streaming to Mac - and even select PDAs and phones). Mac users looking for a similar solution may want to try the a Pproccio iTunes-over-Hamachi.orb is actually designed to provide remote access to all types of media: music, photos, videos, documents, even live and register TV. For our purposes, however, we will stay at the musical side of things. Start to do wnloading and performing the ORB software. During the installation process you will be asked to create an account. You will then ask you to choose which types of media you want to access remotely. Uncheck everything except audio (unless, obviously, you want to convey other things). The final step is to point Orb to the folder (s) containing your music, which you can do by clicking on the Green Orb icon in the taskbar and choose Configure. When it is done, it attracts any browser on any PC and head to mycast.orb.com. Click Open Application and select Audio. Soon: your musical library is waiting for you! (Click on the image for a natural size look.) This web-based jukebox interface has packs in the functionality. You can order your library from all types of criteria (simply by clicking on column headers); Drag and release songs to create playlists; Listen (and even record) Internet radio; And share songs through an Orb Public Page, MySpace page, e-mail, SMS, RSS and so on. My only complaint is that the interface can be slow, especially when you are trying to resize the boxes. Also, Orb cannot transmit traces protected by DRM. But apart from that, the Rocks.Hosting Online service is a negative side to use a service like ORB, it's necessary Your PC running 24 hours a day, 7 days a week (although if you correctly configure the standby mode, you may be able to work that). Furthermore, it consumes system resources and more than a bit of your available bandwidth (which with everything that outgoing streaming) .Tech blog Exoid dissipates a bit of myths on the S3 Standby mode and offers suggestions to use it up to ... Read the moreeconsider, therefore, a service that hosts your online music, thus taking the load from the PC and the network. I looked at MediaMaster, MediaMax and MP3Tunes,Joining The Ranks of Online Music-Library Services Like MP3Tunes, Mediamaster allows you to upload your points byMediaMaster score points by offering unlimited storage (for now, anyway), support for Big-Three audio formats (AAC, MP3 and WMA) and some Nifty sharing options (including a built-in widget). However, the flow tracks just 64kbps, and you can not download the songs you loaded.Mediamax Streams Songs to their native bit rate and allows you to download them, but you are limited to work with MP3 and your free account offers you " Only "25 GB of storage space. If your library is larger than that, you will have to upgrade to a paid account (starting at $ 4.95 / month). My favorite service in the Hosted-Music category is mp3tunes (click on the image below to see it closely and staff), which provides unlimited storage space (even if not immediately - starts with 1 GB and then "updated" is "updated" Unlimited memory), support for virtually all types of audio files, the possibility of downloading songs and interesting web integration: In addition to fill your "Locker" with music from your PC, you can add tracks from other sites only Pasting into their URLs. The great warning with any hosting service is the need to upload your entire library, which could literally take days depending on its size. Once done, however, you have the added advantage of an online backup - always nice if a hard-drive catastrophe happened your musical collection. What are your thoughts in streaming your musical library? Would you prefer to keep songs internally, so to say, or upload them in a hosting service? Did you find another method that is even better? As always, your thoughts are welcome "put them in the comments. Rick Broida, Lifehacker Associate Editor, loves the line of Lily Allen or Amy Winehouse to any PC that is using. Its special feature, Alpha Geek, appears every Monday. Subscribe to the Alpha Geek feed to get new rate in your newsleader. Have you ever been asked if you can view Android messages on PCs? Absolutely, thanks to Android messages for the web. Very like WhatsApp for Web, web messages allows you to Coupling your computer on your phone, so you can send and receive SMS from both devices. The coupling process is simple, as well as the interface. Download the latest version of the messages and then open the app on your smartphone.tap the overflow menu (three points in the upper right corner) and tap Ã ¢ â,¬ Ã ¢ â,¬ Ã ¢ â,¬ Ã ¢ â,¬ Ã ¢ â,¬ Ã ¢ â,¬ Ã ¢ â,¬ Ã ¢ â,¬ Ã ¢ â,¬ Ã ¢ â,¬ Ã ¢ â,¬ Ã ¢ â,¬ Ã ¢ â,¬ Ã ¢ â,¬ Ã ¢ â,¬ Ã ¢ â,¬ Ã ¢ â,¬ "on the computer, Open https: / / messages.google.com/webÃ¢ up Your browser of choice. Before switching to the next step, you can select Ã ¢ â,¬ å "Remember this computer ¢ â,¬ to keep the phone coupled with the browser interface when you close your phone tab, tap Ã ¢ Â , ¬ Ã ¢ â,¬ Ã ¢ â,¬ Ã ¢ â,¬ code scanner Ã ¢ â,¬ Ã ¢ â,¬ scan code on the web page you just opened on your computer. Now now the messages can be connected to the phone to the web on your computer. Now you should see the message interface in the browser window. The functions that you can use with PCYour message history messages will be displayed in the left window with the expanded conversations on the right.tap the overflow menu to access the settings, stored messages, enable dark theme, send feedback, Get help or sign out. The dark theme can also be enabled via the Settings menu. The settings area allows you to change the notification settings and messages preview, torque and phone and computer and computer, set a warning for when the phone uses data instead of wi-fi and Accessibility options such as keyboard shortcuts and high contrast mode. How to answer and start new conversations with PCTO reply messages to an existing message, simply click on the message in the History list window to open that conversation. To start a new conversation, click the button Ã ¢ â,¬ å "Start Chat ¢ â,¬ high from the message history list, then type the name, number or e-mail address of the contact you want Send a message to. A list of the best contacts will also be available. Message in the text entry field at the bottom of the right window. You can add emoji, stickers and attachments while you would normally be on your phone, then click the arrow button to send. Other Android messages on PC Features If you have a dual-sim phone, you will be able to select which SIM card to send the message from the left side of the text entry field by clicking the arrow down. It can deactivate a conversation by clicking the Bell icon at the top right of the expanded view or open the overflow menu for more options. There are additional notification and messaging settings on your smartphone. There you have it Ã ¢ â,¬ "How to use Android messages for text on text via SMS directly from your computer. Any questions? Let us know in the comments. Like TineSandroid, Google Smartphone, PC" Po-Tay-to , Po-Tah-a. Our go-to gadgets are essentially all computers, right? So why not make them work together … and make your life a huge much easier? After all, it is 2015. Performing different platforms is no longer an excuse for devices to act as if they exist in different worlds. 10 suggestions will help you break the barrier between your desktop system and your Android smartphone and make them feel like harmonious extensions of the other.1. Synchronize your computer StorageYour has a local memory, as well as your phone - two separate and non-connected virtual tubes. But with an intelligent application to embrace cloud and a few minutes of configuration, device units can act as if there is one. The Android App Folderync allows you to synchronize the storage between the desktop PC and the Android smartphone. The secret resides in foldersync, an Android utility that costs only one $ 2.87. (There are a free version, but it is bent with the ads and offers limited features.) Foldersync works with a ton of cloud storage providers, including Amazon, Box, Dropbox, Google Drive and OneDrive. As long as the provider is selected, it offers an accompanying program on the PC side (all those I mentioned), you will be good to go. To get everything and run, first install the app on your phone and follow the suggestions to connect it to the Cloud storage service at your choice. Set Ã ¢ â,¬ å "pairsÃ ¢ â,¬ for any folder you want to hold connected with your computer - a folder containing documents or downloads, for example -" and create new folders in your cloud store. Be sure to set the torque To use two-way synchronization. You can choose to instantly synchronize if you want everything to be kept up to date at any time, or you can go for a more suitable configuration to the battery like synchronization once a day if you don't mind a little latency.now installs the desktop app for any cloud service you are using. Open the app, find the coupled folder created and prepared for use. If you have taken a documents folder, for example, you can make A connection to the desktop and download all existing documents in it. Then draw that folder as if it were a regular local resource. All you do will be saved on your hard drive and synchronous zzate in the cloud, where you will automatically find it on your Android device. Any change on your phone will come back to your computer in the same way. Google2. Find and protects your fonecan Find your phone in your usual place between the sofa pillows? Or, worse, come home from a day trip just to understand that you lost your device somewhere along the way? There is no need to panic: your computer can tell you exactly where your mobile companion is. It can also stop it remotely and delete it if necessary. All you have to do is climb Your computer (or any computer, really), browse Google.com in the browser and type Ã ¢ â,¬ å "Find my phone" in the search box. (You should log in to Google before Google ... you would probably want to do In an unknown window if you are not your PC.) In a few seconds, El Goog will give you a detailed map that shows your last registered position of the smartphone. Clicking on it will be displayed displayed Full Android Device Manager interface, where you can find the options to play, block or completely delete the phone so then and there. There is a capture: the phone must be configured in advance to allow everything what happens. Take two minutes right now, while your phone is safe and audio and open the App called Google settings on your device. (Note that we are talking about Google settings, which is not the same as the regular system settings.) Head in the safety menu and make sure that both ¢ â,¬ Å "Remotically locate this device" and Ã ¢ â,¬ ¢ â,¬ "Block and cancellation are activated. Now take a deep breath, relax and think about something else to worry about.3. Beam indications from your computer to your phonemaybe your problem is not to lose your phone, but rather to lose yourself. We all know that Google Maps is fantastic to give directions, but you may not realize that you can send them these guidelines directly from your computer to the phone - without the need for any software over a normal OlÃ web browser, â,¬ â "â" ¢. You can send directions for your smartphone directly from your PC via Google. This is simple: type Ã ¢ â,¬ "Indications for my phone" in Google while it was signed on any desktop system. You will get a box that drives you to type the name of the business or the address you returned. Fill out the empty space and click on the Send - Like Magic command, your phone will open the Maps app and is ready with the indications as soon as you talk about it.4. Give yourself a universal clipboardings How simple things would be if you could hit CTRL-C on your computer and paste the same text somewhere on your smartphone. Or vice versa - highlight the text on the phone and gluing it into a document or email on the PC. An adorable notion, isn't it? Well, pull your daydreaming and make it a reality. A free app called Pushbullet provides power to create a universal clipboard that connects desktop and mobile devices solid to saving time. Install the app on the phone and install the Companion app for your desktop system. Open app settings on Android and make sure it's ¢ â,¬ "copy and paste" is activated. This is: your notes are now connected. Each time you copy the text to your computer, you can instantly paste it to your Android device ¢ â,¬ "and whatever you copy the text to your phone, you can paste it anywhere on your PC. All you have to do is use normal Copy commands and paste at the system level, as you want normally.5. Share Web pages, images and Kill Kill web files for the theme of the pushbullet, take a minute to check the content information of the content of the app. Pushbullet makes it Simple send pages, images and any other file between computer and non-requested telephone. The Android Pushbullet app makes it easy to share pages, images and files and web files from your PC to your Android smartphone and vice versa. Every time you meet an object that Want to share from your phone, use the normal Android Share command - readily available in most apps and system processes - and select Pushbullet as the place where you can Want to share it. On the PC side, Pushbullet offers browser extensions that you can click on any time you want to share. If you want to share the web page or a file you are passing between the devices, open in a new window on the reception of the seconds system after sending it .6. Giving yourself a memory now has a great reminder system that allows you to set memos for certain moments or even positions. You don't have to use your phone to create them, but: from any desktop browser where it has been signed, type Ã ¢ â,¬ Å "REMIND MEÃÃ ¢ â,¬ in Google for An Android dialog box connected. You can then fill out your note along with where or when you want pop-up, and Google will pist your phone in place or at the appropriate time. (You can also save a ride and type the full command at once - Ã ¢ â,¬ "å" Remind me to call Myrtle at 6 tonight, Ã ¢ â,¬ For example, or Ã â,¬ "I indemn you buy pickles when I arrive at LAX.Ã ¢ â,¬) you want to see see Reminder from a PC? Type Ã ¢ â,¬ "Like me my reminders in Google.com. You will get a list of both primaries and past reminders connected to your account.7. Send yourself a notereminders is useful when you have a future time or a place in mind, but if you want to take a note that they appear immediately and be ready for immediate action, the command Ã ¢ â,¬ å "notes to selfÃ ¢ â,¬ what you need. Send a note to your phone directly From your PC typing Ã ¢ â,¬ "A SÃ © in Google, then your note. Write it in Google on your PCÃ ¢ â,¬ "followed by the actual content of your note - and whatever you send you will be displayed as a notification on your phone. It is therefore possible to copy the text and / or share it directly on an app as Gmail or Google Keep.8. Set a Alarlened a Full-Feedged alarm on your phone? Do your computer do your computer by typing Ã ¢ â,¬ "Put an alarm" in Google. This is the easy part; Waking up.9. Access all your computer from your fonewe has not managed to talk to connect your computer with your Android phone without mentioning the most direct connection of all: be able to access your computer from the smartphone screen . Thanks to the free free Google Desktop desktop app, it is easier than ever to do. Access to the desktop from your phone is easy, thanks to the remote desktop Chrome. First, get the app on your phone and enter The Companion Desktop app on your Compu TER. (The desktop app will work on any platform where the Chrome browser can be executed.) Then extract the Android app the next time you need to get on your computer remotely. You will be able to move around the desktop, manipulate the files and even run programs from the palm of your hand.10. Check your phone from your computer bill but no less important, the flip side: check the phone from your computer. Snag An App called AirDroid and go to web.airidesroid.com on your PC. You will be able to perform businesses like sending and receiving texts and watching through lost calls. With the right device, you will also be able to see your complete Android home screen and check the phone from your natural size monitor. With that type of multi-platform connectivity at hand, there is practically a limit that you will be able to realize. ** As long as said revolution, you know, synchronizing things between the phone and the desktop computer. Be realistic, okay? Copyright Â © 2015 IDG Communications, Inc. Inc.
