The lens zoom servo is engaged and disengaged by a switch located on the lower right side of the lens barrel. You will usually hear and feel a soft click when you engage the servo zoom motor. At that point the lens. When the servo is engaged, the zoom is operated either by the large rocker above the camera's hand grip, by the small rocker on the camera's top handle or by a remote controller such as the wireless controller or a wired LANC controller. The zoom servo is also not quite as fast as that of the 16x IS II lens, which can zoom in and out extremely quickly. Located on a rear ring of the barrel, the 16xs ND filter features two settings. The 14x Full Manual lens did not feature any internal ND filter facility. This is a somewhat tedious, but essential, calibration procedure required to ensure that the lens maintains sharp focus throughout its zoom range. In effect, the process adjusts the location of certain lens elements with respect to the camera's CCD block. Backfocus on the lens must be adjusted before its first use and checked periodically, particularly after the lens has been removed from the camera. The mechanism for performing backfocus adjustment, the flange back adjustment ring and its locking screw is located immediately in front of the lens mount. Its optics are excellent, as you would expect from one of the world's premier lens manufacturers. Its true manual focus ring is a joy to use. The stationary front element makes attachment of accessories much easier than with its predecessor, the 14x Full Manual lens. The zoom servo is smooth, although it's not quite as variable as that of the 16x IS II Auto lens. Perhaps the only notable quirk in the lens. While the lens's true manual focus feature may make it attractive to those frustrated with the 16x IS II lens. No matter how steady you think your handheld shots are, this lens will humble you. Put bluntly, this lens is strictly for mounted or externally stabilized ex Steadicam shooting. <http://www.budaikekeret.hu/uploads/dlse-enforcement-policies-and-interpretation-manual.xml>

If your work leads to shooting in more controlled environments, such as scripted dramas or documentaries, then you should look closely at the 16x Manual Servo lens to provide the level of image control precision commensurate with your work. Ken has special interests in developing short dramas and documentaries as well as educational works, and currently shoots with both an XL1S and GL2. We delete comments that violate our policy, which we encourage you to read. Discussion threads can be closed at any time at our discretion. Fully manual focus with barrel marks. 16x zoom with manual and servo control. Rectangular lens hood keeps out stray light. Digital iris control and 2 builtin ND filters. Imported from USA. A key feature of the Canon XLseries camcorders and the only MiniDV format camcorders with this feature, is the XLUnlike other systems, the XL2 offers users the ability to change lenses, whether fromThis not onlyWithin the Canon. XL system alone there are four lenses the new 20x OIS, 16x OIS, 16x Manual, and 3x Wide. Then, using an XL systemOther companies also offer a variety of specialty cine lenses that can be used on the XL2. Wed love to help you out. The Product purchased with this limited warranty is the only PowerShot Digital Camera to which this limited warranty applies. Warranty exchange or replacement does not extend the original warranty period of the Product. The sole warranty, if any, with the respect to such nonCanon brand items is given by the manufacturer or producer thereof. This limited warranty covers all defects encountered in normal use of the Products, and does not apply in the following cases

A Canon Customer Care representative will attempt to diagnose the nature of the problem and correct it over the telephone. If the problem cannot be corrected over the telephone, you will be asked to follow the applicable procedures for MAILIN SERVICE. Note that a dated proof of purchase is required at the time of service. MAILIN SERVICE is a program under which your Product is repaired by a Canon U.S.A. or a Canon Canada authorized service center for the Product. You will be given the name, address and phone number of an authorized service center. It is your responsibility to properly package and send the defective Product, together with a copy of your dated proof of purchase, a complete explanation of the problem and a return address to the authorized service center at your expense. Do not include any other items with the defective Product. The Product covered by this limited warranty and proven to be defective upon inspection will be repaired and returned to you without charge by the authorized service center.

<https://totalyoumovement.com/wp-content/plugins/formcraft/file-upload/server/content/files/162702d3d74db8---boss-equalizer-manual.pdf>

Any Product received by the authorized service center that is not covered by the limited warranty will be returned unrepaired, or at the discretion of the authorized service center, you may receive a written estimate of repair at such cost as the service center may establish from time to time.

User Agreement, Privacy, Cookies and AdChoice Norton Secured powered by Verisign. However, when doing some test shots on a resolution chart, I see very little difference in resolution between the two lenses. However I found the 14x to be a much better lens and the reason why is that I could still feel the servo working in the 16x. Now people have told me I am crazy, but with years of arri and panavision work under my belt, I would say I know what I feel.

When I used the 14x it was real smooth, no pulling and I swear it is sharper, as long as your eyes are able to see focus, make sure you dont need glasses, that has happened before. I feel that the servo being anywhere within a mile of the lens still has some resistance in the lens. Other people feel different, we are all entitled to our own. 14x and 16x are the zoom amount, 16Xzoom. Ask away here, there are some very good people on this site. So there should be no trouble with servo interference in manual mode on this lens. ps. Im thinking of getting one myself but they are very expensive. Take the appropriate action described in the message. For some errors, the ON lamp and the Alarm lamp flashes alternately. Check the status of the lamps and the message, and take the appropriate action. But does anyone have a general scale Like 5.6mm 0.5, 10mm 0.8 Not to scale, ect. I want to be able to shoot around 35 50mm and still get a fairly shallow DOF. Correct me if im wrong. It certainly doesnt have any image quality problems that Ive noticed. Im not too sure on the focus question, Im afraid. Ive never done any filmmaking work with it, always just A\V Production, and you dont tend to notice such things with that. It is very sharp and I use it with a Cine Tech follow focus a lot. Hand held its great too. The zoom speed can be controlled on the XL2s hand grip, by the lens. Zoom speeds are 3 seconds at zoom speed 16 to about 36 second at zoom speed 1. My one complaint is that when you rack focus there is breathing, but you can cover it with a small move. Many zooms exhibit at least some breathing. Mechanical and hard stops for the focus and zoom. The 20x doesnt have any markings, its all electro, so its brushes, no mechanical stops. The Optical Stabilization can be handy for long tele shots and for hand held stuff too. It is also longer in the tele end, which can be good for compression and longer reach. Whats funny is that the 20x does not breathe.

It is very sharp and I use it with a Cine Tech follow focus a lot. Hand held its great too. It is also longer in the tele end, which can be good for compression and longer reach. Whats funny is that the 20x does not breathe. The benefits of the manual lens has been discussed in other threads here in cinematography.com. Its a bit higher estimate than I had hoped for, such is life. Got it, thanks. Its a pro setup thats not used much. So when someone buys this system, they seldom sell it. If I were you Id budget the 16x manual lens and rent the follow focus and matte box when you need them. This allows an assistant to be next the camera and pull focus without disturbing the position of the camera, due to the whips flexibility. Theyre located in New Jersey. Talk to Chris in Sales. Im looking to get a two stage Chrosziel but Im wondering if two stages are enough What are your thoughts on that Two stages seem to be enough, I can probably get a third stage and screw it on myself, if I needed it. With the EOS lenses, you get a 7X magnification, so any lens you put on there will be a telephoto. The EOS lenses are designed for a 35mm still photo frame, so you are extracting from the very center of the image circle. I also own the 20x lens, but primarily use the 16x. Paste as plain text instead Display as a link instead Clear editor Upload or insert images from URL. Canon PowerShot SX160 IS is a easetouse superzoom compact camera features an impressive 16x 28448mm lens with

Intelligent IS, so lifes memorable moments can be captured no matter how far away you are. The 16MP CCD sensor that captures stunning, highquality images and 720p HD videos. The Digic 4 processor ensures that pictures are captured quickly and in lifelike detail. The PowerShot SX160 IS is powered by AA batteries, youll always be ready to shoot.

After the purchase, Ive seen that there was no memory card in the camera Canon Powershot SX160 IS, that Ive bought and the seller said me that I ve to buy this memory card else where. As Im living in Madagascar, could you please inform me what kind and what brand of memory card would be the best for my camera. We lost manual, please mail User Guide for Canon SX 160 is Power Shot to Frank Hicks 2807 Redfield Dr Charlotte NC 28270 Thank You. Dont really want to install everything needed to download the manual on my computer. Im not able to open the CD to read the manual and I dont want to download this to my computer. How do I reset it to english. How do I correct this. Each time the camera is being opened the date and time set previously is going off and I have to set it afresh. What is the solution.How the problem will be solved. Leave a Comment Cancel reply Save my name, email, and website in this browser for the next time I comment. Find out how it performs in our review. Canon Powershot SX160 IS Features It features full manual controls, as well as an Auto mode, scene modes, and creative effects. The camera records 720p video, with stereo sound and allows the use of the optical zoom while recording. A focus assist lamp and pop up flash help in dark conditions, and built in optical image stabilisation adds to the cameras capabilities. Key Features The mode dial is well placed and the buttons on the back are large and easy to see and use. On top is the pop up flash that is activated with a physical button on the back, and to close you simply press the flash back down. The battery compartment features a lock to stop you accidentally opening it. The menu button lets you set additional photo and setup options. In playback there are also playback and print options. You can quickly set exposure compensation, ISO, focus, flash and selftimer using the buttons on the back of the camera making it even easier to set these options without having to go into any menus.

Speed We took a number of shots to test the cameras responsiveness, from switch on to first photo, shot to shot, focusing speed etc. We take a number of shots and then use the average to ensure accurate and consistent tests, making it easy to compare with other cameras. Canon Powershot SX160 IS Performance. Additional sample photos and product shots are available in the Equipment Database, where you can add your own review, photos and product ratings. Exposure and colour is generally excellent in photos, although setting the exposure compensation to 0.3EV can help give images stronger saturation. Dynamic range can be expanded with the use of iContrast. Detail is good into the corners at wide and telephoto settings, and the lens performs well with little to no barrel or pincushion distortion noticed. The most noticeable problem with image quality is due to noise, and noise in some of the outdoor shots in areas of shadow is a little higher than expected, at ISO200. Macro performance is impressive, with the camera focusing on subjects as close as 1cm away from the front of the lens. At ISO200 and ISO400 noise starts to creep in, particularly in the darker shades. At ISO800 noise beings to remove detail from the image. ISO1600 is best avoided as detail and colour is lost. Above this, you need to be in one of the low light scene modes, where the image size is reduced to 4 megapixels and the ISO setting is increased if the camera feels the need. AWB performs well under fluorescent lighting with the preset giving a slightly warmer result. The camera doesnt feature an automatic panoramic mode. Video Videos are recorded at 720p, with stereo sound and optical zoom. Wind cut is an option in the menus. Value For Money Canon Powershot SX160 IS Verdict. The Canon Powershot SX160 IS features a 16x optical zoom lens with image stabilisation and has an easy to use mode dial with settings for beginners up to the more advanced with manual controls.

The camera has a lot of external control with ISO shortcuts and large buttons, and with the addition of AA batteries it could make a great travel camera. Due to quite high noise at and above ISO200, it

would be best used outdoors in good lighting, and the camera produces images with good colour, with excellent macro performance. The camera is decent value for money and whilst it has a few shortcomings such as speed of continuous shooting and slow flash recharge, if you're a little more patient in your photography then it could make a good choice. Canon Powershot SX160 IS Pros New to ePHOTOzine Join Today! By using our service, you agree to our use of cookies. OK Learn more. It features a 16 megapixel sensor, 16x optical zoom which is image stabilised, manual modes for controlling shutter speed and aperture, digital effects and it takes AA batteries. The large lens on the front and raised central area of the top plate give it a bridge camera look. The lens is a 16x optical zoom with image stabiliser built in. The price will dictate a standard lens with no special elements for low dispersion or chromatic aberration correction. Hardly a pocketable camera, the lens sticks out by a good centimetre from the main body. It makes the Canon PowerShot SX160 difficult to carry around discreetly. The most comfortable way is by hanging it round your neck with an additional neck strap that isn't included in the box. It's activated by pressing the black button just above the screen. A large command dial sits just to the right of the flash and it might not be the first time that a command dial has been included on a camera of this price but we still think it's pretty swell of Canon to include it. There are 10 options ranging from full manual mode to fully automated where the camera stops shy of taking the picture for you. It's a "Kodak" philosophy about bringing photography within reach of everyone which is great.
