Just dont expect much in the way of features. To this end, Sony has denied it the colour options made available to its Wseries comrades, which can be picked up in various hues, such as pink, red and gold. You will have to settle for the tech staples of either black or silver if youre after the DSCW110. In either colour, the brushed finish will prove its worth as a welcome deterrent against fingerprint marks and smudges. This allows bigger fingers to intuitively find them, although some may find that they still remain too small for their liking. The raised zoom rocker on the back of the camera is easy to use and the ridged mode dial clicks through its options with a satisfying level of resistance. Rather than remaining flush with the cameras surface the LCD is also raised. Each turn of the wheel displays the mode and a brief descriptor of its function on the right of the LCD — providing easy navigation around the camera for those who want a highly automated, guided experience. This description appears only briefly, acting as a useful prompt rather than an annoyance. There are five slideshow styles through which you can view your happy snaps, all of which can be accompanied by either eight underwhelming preloaded musical tracks, or any music you choose to upload onto the camera.

You will need to use Sonys proprietary port which combines data transfer and AV functions. Be aware that this port has been left open and exposed to the elements and, consequentially, any fluff that might gather in your bag or pocket. Photos can be organised into folders and that is about it — dont expect the likes of redeye reduction editing. Disappointingly for a cutprice camera youll have to fork out extra dosh for a Memory Stick, Memory Stick Duo, Memory Stick Pro or Memory Stick Pro Duo card. Theres also face detection, that can be configured to preference adults or children, and sensitivity of up to ISO 3200. To assist beginners, the ISO menu gives you information on the available image sizes, such as VGAsized pics useful for small images intended as email attachments and 7.2megapixel images which give you the flexibility to create quality images of A3 dimensions. Generally speaking the performance of the DSCW110 is good for an entrylevel unit. It is able to collect its first shot after start up within four seconds. Without a flash youll be able to get a shot every 0.8s when in burst mode. When taking shots manually with a flash you can gather an image every three seconds. This blurring is fairly significant and, when one considers the cameras quick shot time, represents an annoying deviation in the DSCW110s high construction standards. As a consequence, it makes life difficult when trying to set up shots on busy streetscapes or when trying to capture action scenes such as sports. Some salvation comes in the cameras inclusion of an optical viewfinder, but the viewfinder is relatively small and ungainly to use. If youre happy to have a pointandshoot without much in the way of features, then this compact digital camera will point and shoot for you and then. well. point and shoot some more.
