If you have any questions about paper and transparencies, consult your dealer or Canon Customer Relations. Printing area light shade Canon recommends that you print within this area. I Paper 0.20". CAUTION Grip the cassette handle, and pull it out towards you until the cassette comes to a. If copying is performed when the cassette is not pushed in completely, it will cause a paper jam. If copy paper is sticking out of the cassette Sometimes, when you pull out the cassette, paper may stick out, as shown in the illustration below. You can adjust the cassette to hold the following standard paper sizes LGL and LTR. If you want to make copies on any other size paper, use the multipurpose tray. Using other envelopes may affect the quality of the copy image. Arrange the stack of envelopes on a firm, clean surface, and press down firmly on the edges to make the folds crisp. Fan the edges that will feed into the machine first then, tap the edge of multipage documents on a flat surface to even the stack. Adjust the slide guides to the width of the document. When a document is placed on the platen glass, the scanning unit moves to scan it. Available setting range in length 5". Three modes are available for adjusting image quality. Press Image Quality to select the image quality. 1 0 0 % L T R T E X T Each time Image Quality is pressed, the image. I When Loading Documents in the ADF Load the first page of the document face down in the ADF, then press Start to

begin copying. Place the next page of the document on the platen glass. Portrait orientation documents Place the page so that the top edge is opposite to the top edge of the previous page. This is caused by paste, ink, correction fluid, or other foreign matter in the read area between of the platen glass. NOTE If white streaks or light bands are displayed on copies, or. Hold the cartridge as shown below, so that the Canon logo label is facing up.
<http://alnadaoil.com/userfiles/hyundai-monitor-l70s-manual.xml>

Position the arrow mark on the cartridge toward the inside of the machine, and gently slide the cartridge into the machine as far as it will go. Please Note Do not send defective cartridges for replacement. Residents of Alaska and Hawaii Do not use the UPS authorized returning label. For Alaska and Hawaii Canon set up alternative mail service with the U.S. Postal Service. Please call 1800OKCANON to receive U.S. Postal Service merchandise returning label. This donation is utilized in Canada. If the machine is likely to be subjected to vibration e.g., when transporting over long distances, the following precautions should be taken. If you do not follow these precautions, the machine may be damaged or the quality of your copy images may be adversely affected. Removing Jammed Paper from Inside the Main Unit When print media jams inside the main unit, the LCD displays REC. PAPER JAM and SLIDE PLATEN LEFT. Gently remove the jammed paper from the document output slot of the ADF. Open the feeder cover and gently remove the jammed paper from the ADF. This section describes the general messages and ones related to copy functions. Message CHANGE DOCUMENT CHECK DOCUMENT. CLOSE THE PLATEN There is a paper jam. REC. PAPER JAM SLIDE PLATEN LEFT A document has been left on the REMOVE DOC. ON GLASS platen glass. The toner inside the cartridge is REPLACE CARTRIDGE running low. They will cause a paper jam. Please use transparencies recommended by Canon. If the problem is fixed, the Alarm indicator will turn off, and the LCD will return to standby mode. Available menus differ depending on the machine type. This chapter explains the procedure to access the menus, and the contents of the menus related to the common settings and the copy functions. For highquality copies, we recommend using paper and transparencies recommended by Canon. Some types of paper available at office supply stores may not be suitable for this copier.

If you have any questions about paper and transparencies, consult your dealer or Canon Customer Relations. This page requires Javascript. Modify your browsers settings to allow Javascript to execute. This warranty shall not extend to consumables such as paper, as to which there shall be no warranty or replacement. Warranty replacement shall not extend the original warranty period of the Product. Note that a dated proof of purchase is required at the time of service. This requirement will be satisfied by providing a copy of your dated bill of sale or invoice. You must contact an ASF during such ASFs normal business hours to schedule the repair. If shipping is involved, it is your responsibility to properly package and send the Product at your cost to the ASF, together with your dated proof of purchase and a complete explanation of the problem. A Product covered by this limited warranty will be repaired and returned to you without charge by the ASF. Repairs not covered under this warranty will be charged to you at the thencurrent service rates of the ASF. If the problem cannot be corrected over the telephone, the Canon Help Desk will have a local service technician contact you to arrange for next business day service. You will be charged at the thencurrent service call rates of the ASF if the defects in the Product are not covered by this limited warranty, or if the first year of the warranty period on the Product has expired or has not been sufficiently established by appropriate documentation. Canon USA does not guarantee next business day service in the event of the occurrence of factors beyond Canon USAs reasonable control. Nor does this warranty extend to any Product on which the original identification marks or serial numbers have been defaced, removed, or altered.

The warranty in the preceding sentence applies to Toner and Drums. A defective Toner or Drum returned to Canon U.S.A., Inc., Canon Canada, Inc. or an authorized Canon representative. The warranty period for any Drum is one year from the date of purchase. Canon USA, Inc., Canon Canada, Inc. or a Dealer. To obtain the shipping address of Canon U.S.A., Inc. or Canon Canada, Inc., please call the Canon U.S.A., Inc. Help Desk at 18008284040 or Canon Canada Technical Support at 1800OKCANON. Shipping charges, if any, must be prepaid. If your Toner or Drum is covered by this warranty, contact the Dealer from whom you purchased the Toner or Drum. Toner or Drum yield will vary depending on average density of originals copied and other factors. Canon does not warrant that the Toner or Drum will not cause abnormally frequent service calls or service problems. Nor does Canon warrant that the Toner or Drum will not cause damage to the printer or other equipment. Keep the printer away from contact with oxidizing materials. Refer to instructions for handling and storing. The driver may be included in your OS or you may not need a driver. Recommended Drivers

This manual covers all localities where the products are sold. For this reason, there may be information in this manual that does not apply to your locality. When changes occur in applicable products or in the contents of this manual, Canon will release technical information as the need arises. In the event of major changes in the contents of this manual over a long or short period, Canon will issue a new edition of this manual. Under the copyright laws, this manual may not be copied, reproduced or translated into another language, in whole or in part, without the written consent of Canon Inc. Therefore, the operations of the microprocessors used in the machines are not discussed they are explained in terms of from sensors to the input of the DC controller PCB and from the output of the DC controller PCB to the loads. For this reason, laser radiation emitted inside this machine is hermetically sealed within the protective housing and external cover. No radiation can leak from the machine in the normal operation of the product by the user. These regulations apply to all laser products produced on and after August 1, 1976, and a laser product cannot be sold unless it has been certified to comply with the regulations.

The following is the label used to indicate that the product has been certified under the regulations, and all laser products sold in the US must bear the label. If exposed to laser light, the human eye can irreparably be damaged. Never attempt to disassemble the laser scanner unit. It is not designed for servicing in the field. It may explode. They are likely to react with each other. The laser driver serves to turn on the laser diode according to the laser control signal and video signals from the engine controller. It, however, does not identify a BD error under the following condition The resulting toner image is then transferred to paper by the work of the transfer charging roller, and the paper is sent to the fixing assembly. The surface of the photosensitive drum is cleaned by the cleaning blade so that it is free of residual toner; after cleaning, the primary charging roller once again charges the surface to an even, negative potential to prepare for the formation of a new static, latent image. To protect the drum against light, the machine is equipped with a drum cover shutter. The drum cover shutter must never be opened unless doing so proves to be absolutely necessary. The paper is then moved from the transfer assembly to the fixing assembly by the feed roller; it is ultimately delivered outside the machine by the work of the delivery roller. If the faceup cover is closed, on the other hand, the paper is moved along the feed guide of the cover, and is delivered facedown at the top of the machine by the work of the facedown delivery roller. In addition, the machine turns on the feed roller manual pickup solenoid to stop rotating the feed rollers, thus preventing the manually inserted paper from being fed askew. With the paper pressed against the feed rollers, the machine drives the main motor and turns off the solenoid to feed the paper between the feed rollers.

If paper exists over the top sensor at the start of timing retry, the machine stops cassette pickup control. If paper does not exist, the machine retries cassette pickup control. The machine identifies a pickup delay jam if the top sensor does not detect the leading edge of paper within 1.2 sec after the 2nd pickup operation. The machine is designed to identify such a jam so as to prevent wrapping paper from fully moving into the fixing assembly. When the temperature of the fixing heater increases abnormally and the voltage of the fixing heater temperature detection signal of the main thermistor reaches about 0.775 V equivalent of 235 deg C or less, the output of the comparator turns Low to turn off the relay, thus cutting off the power to the fixing heater.
