Read More Scrabble score for âSearch':13 The search for information that can be directly applied to practice is aptly known as applied research. The aim of this research is to determine the applicability of the and principles through the experimentation of hypotheses within specific contexts. What is Applied Research? Researchers in this field try to find immediate solutions to the existing problems of a company, industry or enterprise. a company.People are not able to predict the future sufficiently clear to predict the development of basic research. If only we applied the search, we would still make better lances. The needs of social action inspire applied research. Applied research, unlike pure research, involves large-scale studies, resulting in data collection problems. One could legitimately say that the purpose of applied research is the improvement of human conditions. For example, applied researchers can study ways and means to improve agricultural production; treat or treat a specific disease; improve energy efficiency of homes, offices or means of transport; Suggest innovative and modified measurement methods in each specific research. Some scientists believe that the time has come to shift the emphasis from basic research to applied research to the benefit of the human population. In recent years, applied research, under operational research, has had extensive applications in health and family planning programs to identify problems and design and assess policies and programs that can provide the most significant benefits at affordable costs. In social sciences, research is often a mix Examples of Applied ResearchExample #1Eclampsia is one of the main causes of maternal mortality in Bangladesh. From clinical observations in Bangladesh and elsewhere, it is observed that early cesarean cutting can cancel the violent effect of this serious disease. has been undertaken in our country. It is proposed to carry out a comparative study between the cesarean cut and the vaginal birth in Eclamsia. This study will greatly reduce maternal and prenatal mortality and thus improve our health. Example #2It has been observed that in Bangladesh the percentage of women who are born with cesarean cut is very high. for difficult deliveries. A study can, therefore, be conducted to check whether this proposition is true. Example #3 Ethnic minority trades exist in many parts of the world. Their effort to start an activity is often explained asThe Afro-Caribbean settlers, Indians, Pakistanis and Banglades in Britain constitute the majority of ethnic business communities. These ethnic entrepreneurs are facing various problems that hinder business development and business. Several services and organizations have been developed to revise the small business sectors in Britain. According to the results of his study, the author concluded that entrepreneurs of ethnic Banglades were not sufficiently aware of the consultancy and assistance services provided by different organizations. Those who were aware of not making full use of such services. Example #4In the survey of adventure travel conducted in a US county, managers of a group of county river basin suppliers wanted to know how to increase customer satisfaction and business repetition for their multiple-day river trips. They wanted to make their business more predictable and profitable. Traditionally, basic research is considered as an activity before applied research, which in turn precedes development in practical applications. Recently, these distinctions have become much less net and sometimes all stages mix. Discoveries can be realized in parallel with the development of new products and in areas where public and private partners collaborate to develop a greater understanding of the main areas of interest. Basic Search vs. Research applied# Basic researchApplied Research1Basic research is sponsored by an agency or organization engaged in general knowledge development. Applied research is sponsored by an agency that has an interest in results. 2Resources Applied research results become the property of the sponsor.3The basic research studies are based on the established reputation of researchers and are entirely under their control. Applied research studies follow precise criteria of reference developed by the sponsor to meet the needs of the sponsor.4The budget appropriations are generally based on global proposals and the accounting is left to research. Budgetary responsibility is directly linked to the sponsor and refers to agreed terms, times and methodologies.5 The management of research is based on the 'good faith' between the financing agency and theApplied research includes applied recommendations or suggestions for actions leading to implementation. 7The basic research tends to extend an identifiable academic discipline. By its nature, applied research tends to be interdisciplinary. 8 Basic research tends to extend to an identifiable scientific discipline. Applied research tends to be interdisciplinary. 8 Contract research often analyses the consequences of alternative political options. 9 Decisions concern theoretical evidence of statistical relevance. Decisions concern conventions and agreements between the sponsor and the researcher.10 Research reports are intended for other researchers specialized in the same field. The main objective is to contribute to basic theoretical knowledge. The main objective is to obtain practical advantages or to use the results.12 Success occurs when the results appear in a scientific journal and have an impact on others in the scientific community. Success is achieved when the results are used by the sponsor/client in decision-making.
