Sketchup roof plugin

Sketchup roof plugin free. Lamella roof sketchup plugin. Sketchup roof tiles plugin. Best sketchup roof plugin. Instant roof sketchup plugin crack. Sketchup roof truss plugin. Roof plugin sketchup 2018 free download. Sketchup roof plugin free download.

In today's SketchUp extension introduction video, we're going to talk about an extension that allows you to quickly create roofs for your models in SketchUp! This SketchUp Roof plugin (Roof by TIG) allows you to create multiple different kinds of roofs quickly and easily in SketchUp. Do you like these SketchUp tutorials and videos? If so, please consider supporting me on Patreon (click here to support) or by visiting my Support the Show Page! Plugin Name: Roof Plugin Developer: Tig Plugin Cost: Free (Please remember to donate to your developer) ROOF BY TIG DOWNLOAD - ROOF MANUAL LINK - (Second Post) Tool Functions Roof is an extension from Tig that contains a suite of roof creation tools. If you've ever struggled to create a roof on a building in SketchUp, this extension can make your life a lot easier. The way it works is simple - you simply create your building, then select a face, go up to extensions, roof, and select the kind of roof you'd like to create on your building. This extension allows several different kinds of roofs - Hip Mansard/Sprocket Gable ended Pyramid In addition, it also contains a tool that allows you to measure the slope of a face. The first thing I want to note is there is a very helpful help file that doesn't get downloaded and installed with this extension. I've linked to it up above - it's a very comprehensive guide with some very helpful tips. Now let's take a look at some of the options that come along with this extension: Roof slope Fascia Size and Soffit Size - Allow you to set the height of the vertical fascia on your roof as well as the length of the overhang. You can also set if the fascia or the soffit slope. Select layer and materials - set what layer the roof gets placed on, as well as the material of the roof, soffit, and fascia. Note that the only materials that show up in these lists are materials actively in your model, so you may need to create a little surface somewhere with the roof material you'd like on it. Mansard/Sprocket allows you to set the lower and upper roof slopes, as well as the height of the upper roof (in addition to all the other tools we discussed before). The gable ended roof allows you to pick the side of your roof that the gable will be on by selecting multiple points. The dropdowns allow you to adjust the kind of gables created. Pyramid works in much the same way as gable - you select 3 points to create your roof from. Finally, if you ever want to calculate the slope of a face, you can run the get slope tool to select one individual face. The latest Cleanup Plugin is V3.4.3, the main feature of Cleanup Plugin is to clean the sketchup file by deleting hidden or unused objects. The plugin is easy to use, you install the plugin as usual, set it up once, and next time use it with just one click. General information: Latest version: V3.4.3 Author: thomthom Requires Sketchup 7.1 or newer. Main feature: Delete hidden objects contained in the file Delete unused objects: Components, Materials, Layers, Styles Delete extra edges located on the same plane. When to use the Cleanup Plugin: When you use Dynamic Sketchup models that need a lot of customization and have many hidden objects, when you finish drawing you need to use Cleanup to clean the file. When you use game of nesting plugins like ABF or Opencutlist, before making statistics, you need to clean up before making statistics so that many redundant objects will not appear. Guide: You just need to set up as shown below to delete unnecessary objects. Cleanup Sketchup Plugin Download Share FacebookTwitterPin ItLinkedIn By chuck vali on June 4, 2016 - 11:43am I have now included my extensions for SketchUp on my website. I refer to my extensions as Instant Scripts -- Instant roof, Instant Wall, Instant Road, Instant Door & Window, Instant Fence & Instant Site Grader. A couple more are still in development and will be added soon. While I really enjoyed my cadmonkey days using Autocad and writing lisp on the fly, I have much more fun modeling and writing scripts in SketchUp. But there is still a place in architecture for 2d. We are 2-dimensional creatures. We move about in a horizontal plane, then relocate to another plane via a stair or elevator. And builders continue to layout buildings in 2d. So for architectural tools, my vote is: SketchUp plus 2d cad. On the SketchUp Scripts page you will find several extensions. Read - Instant Roof Plugin reviewed by Google (Nov. 2010). Extensions are for SketchUp Make or Pro versions 8, 2013, 2014, 2015 and 2016, Mac or PC. I hope you will find them useful. SKETCHUP PLUGIN Instant Roof Gable, Hip, Shed, Mansard, Dutch Gable, Split-Pitch,.... Eave types: Boxed-in, Exposed, Soffited Rafters, Hips, Fascia, Fascia trim,.... Ridge types or shingles, standing seam,.... User Defined Roof Styles,.... Metric or Feet / Inches
