Objectives A systematic study of less common normocytic anaemia in pregnancy facilitates the diagnosis of specific diseases. As a result of a case, it is performed a differential diagnosis of severe normocytic anaemia in pregnancy. Method A thirteen weeks pregnant diagnosed pernicious anaemia does not improve with a proper treatment. A systematic review based on Embase, Cochrane Library, Medline, RCOG, ACOG in the period of 1990-2015. Result It was diagnosed a case of multiple myeloma in gestation. It obtained a logic algorithm of the diagnosis of anaemia in pregnancy. Conclusion Anaemia in pregnancy is a common condition by 50% of pregnant women worldwide and 20% in our midst. The vast majority corresponds to microcytic anaemia caused by iron deficiency. It is diagnosed from the study of severe anaemia normocytic a case of multiple myeloma in a pregnant woman. The regulated study of anaemia in pregnancy allows the differential diagnosis of anaemia microcytic, normocytic and macrocytic and occasional finding of potentially serious blood diseases.
