LibreCAD CAD templates, blocks etc.... Part 1 Creating Wall Part 2 Insert Door & Window Part 3 Text & Hatch Part 4 Dimension Part 5 Title Block & Plotting LibreCAD Tutorials / Manual topics Page 2 LibreCAD Tutorials / Manual topics Page 3 LibreCAD Tutorials / Manual topics Hello, I want to use librecad but in minute 1, I don't know even how to download... I see these places to downloads: //github.com/LibreCAD/LibreCAD/releasesNow both of them contains lot of links, folders, etc.... Which one do I download and what files, and then which file does the installation under which folder. This is discouraging. Is there not a "download" button that will give us an installer to install? I am not a computer wizard. I just want to draw simple sketches. I have no idea what to do with which of these links... Question 2: We can use librecad to draw things that we will use commercially too correct? (i.e. drawing sketches, figures to give to a client, or to put the drawings we made on a website, or book etc...) - in other words, it is not just for home or student use correct? 12 This post was updated on . Download an install librecad. You can use libreCAD in linux, windows, and mac. Librecad untuk Indonesia.. This post was updated on . Work with layer - librecad Librecad untuk Indonesia.. Once the entity have been selected press the ENTER key 5. Specify the reference point of the block 6. The reference point is the base of the object when it is inserted 7. Write a unique name for the new block Librecad untuk Indonesia.. 12 Sorry for the newbie question but I am a newbie. How do I specify the length of a line drawn in Librecad? I'm aware I can set a point and drag the line with my mouse, but how do I accurately set the length of a line, in my case, in mm. Cheers. Glenn. "It's a basic truth of the human condition that everybody lies. The only variable is about what." - House M.D Hi Glenn, You may use snap toolbar or command line to specify precise coordinates. for example, to draw a line 1.25mm in length at angle 25 degree: 0, main menu: Edit->Current Drawing Preferences->Units, set main drawing units to mm ; 1, main menu: Draw->Lines->2 points , to start line drawing; 2, choose the start point; Please notice the relative zero is moved to the start point 3, when prompted to choose the next point, use spacebar or mouse clicking to activate the command line; 4, type in @1.25
