We need to consider whether the operating system version of the software is compatible with our device and whether the current iOS version of our device is supported. However, you can still find some free tools or methods that seem to be able to help you bypass the activation lock of iOS 12/13 or some older versions without any cost. But the question is, do they really work? 1. Does the free iCloud Activation Lock removal tool really work? Before we discuss the cost of the iCloud activation lock removal tool, our first and foremost concern is effectiveness. Solving the problem is the key. Although some iCloud activation lock removal tools claim to be free, sometimes they can consume a lot of time and effort, and even present a certain risk. Why are they free? The first thing to understand is that free bypass tools are free because they either exploit vulnerabilities in iOS, such as DNS bypass methods, or are developed by non-profit hacking organizations. However, due to the free nature of these tools, developers or inventors usually don't put much effort into maintaining them. 2. DNS method To bypass the iCloud activation lock, you can try changing DNS Settings to certain servers on the activation lock screen. This also allows you to bypass the activation lock and use certain features of your iOS device.The trick to removing the iCloud activation lock in iOS 16/17, which has been proven to work for many iOS 16/17 users, has also been proven to work as an iCloud removal tool for iPhone 4S through iPhone 6. But there are also reports that it never worked. But if you have an older model such as an iPhone 4s through iPhone 6, or if your device is running the exact same version of iOS as iOS 16/17 or earlier, then this method may be right for you. To use the DNS method to bypass the iCloud activation lock, you can try the following steps. Step 1 Restart your iPhone and go to Settings > Country/Region and Language. Step 2 Select a Wi-Fi network and connect it. Then find "DNS" and type one of the following based on your zone: USA/North America: 154.51.7Europe: 155.28.90Asia: 155.220.58Rest of the world: 109.17.60Step 3 Click Back, tap the Wi-Fi network again, enter your Wi-Fi password, and tap Join. Step 4 After clicking "Back", your iPhone will attempt to activate and go to the new page. Then return to the Wi-Fi page. Step 5 At this point, you will see iCloudDNSBypass.net. Tap the Menu icon to access applications and features. Step 6 Select any app that will give you the correct information about the owner of the app so that you can contact it to remove the iCloud activation lock from your iPhone. Note: The success rate of this free iCloud activation bypass method is not very high, and it is highly dependent on your Internet connection and the stability of your DNS server. If successfully bypassed, you will only have access to the limited functionality provided by the server. 3. iCloudin Regarding the Cloudin tool, it is claimed that it is free to bypass the iCloud activation lock even on iOS 12/13. But the prospects for its free service are not good, and user feedback has not been effective every time. For example, iCloudin claims to be compatible with all iOS devices, but when it actually tries it on the iPhone X, it doesn't work. Although it is not as effective as the professional option, if you choose to use this tool, the following short guide can help you better understand the tool. Step 1 Install and launch the software on your computer and connect your iPhone, iPad, or iPod touch to your computer. Step 2 After the program detects your device, click "Start" and select your iDevice model, and click "Next" to continue. After the scan in Step 4 is complete, iCloudin will start bypassing your iCloud activation lock. The process takes about 20-30 minutes. When finished, the device will restart. Note: Different versions of iCloudin may be developed by completely different developers, so beware of scams. 4. DouliCi Activator has been getting a lot of attention recently as an iCloud unlocking tool. The DouliCi Activator was not provided by the original DouliCi team. DouliCi was part of a team that specialized in providing a free online bypass activation lock service in 2014, using a vulnerability to help users bypass activation locks completely for free. But since Apple patched the bug, the free service has been suspended. The more recent DouliCi Activator works as follows: Step 1 Download the DouliCi Activator server file you received from TrialPay for free and install it on your Web server. After extracting the file in step 2, you will see the file "Download douliCi iCloud unlock tool". Installation on a web server is very simple and similar, just install the script on the local server and then edit the host file. Step 3 Connect your iPhone, iPad or iTunes iPod via USB cable, wait a few minutes, and unlock! Step 4 Exit the tool and disconnect the device from it. Note: While DouliCi Activator is very popular for bypassing activation locks, there are risks associated with using unofficial tools to unlock, so please consider them carefully. 5. GadgetWide DouliCi Activator has nothing to do with the original DouliCi team and is a completely separate tool. Among the many tools available to bypass iCloud activation locks, GadgetWide is one of the most popular. It's user-friendly, compatible with most Apple devices, and can efficiently remove iCloud locks for free. Moreover, it is completely free to download and use, and turnaround time is very fast. However, GadgetWide's YouTube channel has stopped uploading videos for more than five years, and presumably no one has updated the iCloud activation lock removal tool now, and there is no reliable reference to whether the tool still works. While these methods may help you bypass the iCloud activation lock, please be aware that they can be risky and use them within the law! When bypassing the iCloud activation lock, be sure to comply with laws and regulations and not infringe on the rights and interests of others. PART 3 iCloud Activation Lock Removal Service In addition to the free and paid iCloud activation lock removal tools, there is another option: an online iCloud activation lock removal service. This is the easiest way to remove an iCloud activation lock, but it's also the least recommended. Because some online activation lock removal services may be risky. Online iCloud activation lock removal services usually require your device's IMEI number and a prepayment. But after you pay the fee, all you can do is wait and hope they get the job done. In addition, if the information of your device is obtained by a third party, it may be used for illegal activities. In addition, even if the service is real, it is not always possible to successfully remove the activation lock, so the success rate of this method is not high. 1. Online Service example - Official iPhone Unlocking Tool iPhone online unlock service, save time and effort. The official iPhone Unlock is an online activation lock release service that requires only the price paid online and the IMEI serial number provided. The advantage of this online activation lock removal tool is that you do not need to download or install any third party applications. But even if you pay a fee, you may not be able to unlock it. You can try it out by following these steps. Step 1 Go to the website and click "iCloud Unlock". Step 2 Select your phone model and enter the device's IMEI or serial number. Step 3 Complete the payment on the secure page and then the unlocking process will begin. Official iPhone unlocking services can save you the hassle, but can be more expensive and have no guarantee of success. 2. Other Online Activation Lock Removal Services The official iPhone unlock is just one example of how the online iCloud activation lock service works, and there are tons of other similar services. If your iPhone is locked, you may need to look for a way to unlock it. In addition to the official iCloud activation lock service, there are many other similar online services such as iPhoneIMEI.net or icloud-activation-lock.com. Before deciding to use any kind of online service, be sure to conduct careful research and investigation to ensure that the service you choose is authentic and reliable. PART 4 FAQs about unlocking the iOS activation lock Q1 How do I choose the iCloud unlock tool from paid, free and online options? The free iCloud bypass tool has the lowest success rate, but you can give it a try if you're not in a hurry.
