Go to buildapc r/buildapc I've seen some all white builds and they can look pretty striking. Anyone ever build a PC or see one with white components in a black case? Or mix and match enough white and black to make something cool and different? This page may contain sensitive or adult content that's not for everyone. To view it, please log in to confirm your age. I know race is an opaque concept, but even as an imperfect measure it is used regularly in US discourse to describe everything from student demographics at Harvard to political party voting patterns. I asked ChatGPT for a rough racial breakdown of the entire planet into the five traditional races: European, African, Native American, Polynesian, and Asian. It replied as follows: The percentages of these five major racial or ethnic groups in the world's population can vary depending on the source and the time period in question. Additionally, racial and ethnic categories are not always consistent across countries and regions. However, I can provide a rough estimate based on data available up to my last knowledge update in September 2021: 1. White/Caucasian: This group is estimated to make up a significant portion of the global population, often over 10% but potentially higher, as it includes people from Europe, North America, parts of South America, and other regions. 2. Black/African: The Black or African population is estimated to be around 14% of the global population. This includes individuals of African descent from various countries worldwide. 3. Asian: The Asian population is the largest among these groups, making up roughly 60% or more of the global population. It includes people from East Asia, South Asia, Southeast Asia, and other regions. 4. Native American/Indigenous: The percentage of Native American or Indigenous people in the world's population is relatively small, estimated at around 5% or less. 5. Pacific Islander: The Pacific Islander population is a smaller percentage of the global population, estimated to be around 0.5% to 1% or less. I have found informal sources that have roughly the same figures and I suspect they're broadly accurate, but I am finding it almost impossible to find a reliable source for such numbers, even though ChatGPT says organizations like the UN and World Bank collect such figures. Does anyone know where I might find such a source? Page 2 5 que la raza es un concepto opaco, pero incluso como una medida imperfecta se usa regularmente en el discurso estadounidense para describir todo, desde la demografía estudiantil en Harvard hasta los patrones de votación de los partidos políticos. Le pregunté a ChatGPT por un desglose racial aproximado de todo el planeta en las cinco razas "tradicionales": europea, africana, nativa americana, polinesia y asiática. Respondió lo siguiente: Los porcentajes de estos cinco grupos raciales o étnicos principales en la población mundial pueden variar según la fuente y el período de tiempo en cuestión. Además, las categorías raciales y étnicas no siempre son consistentes en todos los países y regiones. Sin embargo, puedo proporcionar una estimación aproximada basada en los datos disponibles hasta mi última actualización de conocimiento en septiembre de 2021: 1. Blanco/Caucásico: Se estima que este grupo constituye una parte significativa de la población mundial, a menudo más del 10%, pero potencialmente más alto, ya que incluye personas de Europa, América del Norte, partes de América del Sur y otras regiones. 2. Negro/Africano: Se estima que la población negra o africana representa alrededor del 14% de la población mundial. Esto incluye a personas de ascendencia africana de varios países del mundo. 3. Asiático: La población asiática es la más grande entre estos grupos, representando aproximadamente el 60% o más de la población mundial. Incluye personas del este de Asia, el sur de Asia, el sudeste asiático y otras regiones. 4. Nativo americano/Indígena: El porcentaje de personas nativas americanas o indígenas en la población mundial es relativamente pequeño, estimado en alrededor del 5% o menos. 5. Isleño del Pacífico: La población isleña del Pacífico representa un porcentaje menor de la población mundial, estimado en alrededor del 0,5% al 1% o menos. He encontrado fuentes informales que tienen aproximadamente las mismas cifras y sospecho que son ampliamente precisas, pero me resulta casi imposible encontrar una fuente confiable para tales números, aunque ChatGPT dice que organizaciones como la ONU y el Banco Mundial recopilan esas cifras. Alguien sabe dónde podrá encontrar una fuente de este tipo?
